

Week beginning 8th June 2020

This week's STEM project theme is:

Choose from this list of tasks and let us know what you find out!

Transport Inventors

Find out about famous transport inventors such as Henry Ford or The Wright Brothers and create fact files about them.

Draw and label the types of transport they invented.

How do their inventions differ from today's transport?

Place their modes of transport on a timeline using their invention date.

Cool Collages

Create your own transport collage!

Draw, paint or colour a range of vehicles or make a large collage of one vehicle.

You could also cut up magazines and leaflets for your collage.

Let's Talk!

Talk as a family about transport in your life.

How do your family members usually get to school or work? Do you get your food delivered? Does anyone in your family operate a mode of transport? Is it their job?

Make a mindmap to show all the ways your family relies on transport and then imagine life without it.

Transport Around the World

Research how people travel in different countries. In the UK we use boats, trains, planes and more, but what about rickshaws in India or gondolas in Venice?

Design a new vehicle suitable for each of these places and think carefully about what materials you could use.
